RUMAH NINGRAT DASHBOARD

Dashboard Documentation

The Glass Box — Radical Transparency Dashboard

Version	1.0.0 — Demo Edition
Client	Rumah Ningrat (Subang & Pejambon)
Platform	Meta Ads, Instagram, Facebook
Date	3 April 2026

1. Dashboard Overview

Rumah Ningrat Dashboard is an AI-powered marketing performance monitoring system designed specifically for the Rumah Ningrat property business. The dashboard consolidates real-time data from Meta Ads, Instagram, and Facebook into a single, centralized view that is easy to understand and act upon.

Philosophy: The Glass Box

"Radical transparency. The client sits in the cockpit; the dashboard provides the flight data." This dashboard is designed to give clients full visibility into their marketing performance without needing to understand the technical details behind it.

Dashboard Access

URL	https://rumah-ningrat-demo.streamlit.app/
Platform	Web browser (Chrome / Firefox / Edge)
Device	Desktop / Laptop (optimal), Tablet (supported)

2. Dashboard Modules

Module 1 — Revenue Engineering

This module displays Meta Ads (Facebook & Instagram) performance in detail, focused on spend efficiency for a property lead generation business.

Section A: North Star Ribbon

A summary of key KPIs always visible at the top of the page:

- Total Spend — Total ad budget used within the selected period
- Impressions — Number of times the ad was displayed to the audience
- Clicks — Number of times the audience clicked the ad
- Avg CTR — Average Click-Through Rate (property benchmark: >1.5%)
- Avg CPM — Cost per 1,000 impressions (in IDR)
- Avg CPC — Cost per click (in IDR)
- Top Campaign — Campaign with the highest CTR in the period

Section B: Campaign Terminal

A detailed breakdown table per campaign, categorized by funnel stage:

- TOF (Top of Funnel) — Awareness campaigns: building brand recognition
- BOF (Bottom of Funnel) — Lead campaigns: driving prospective buyers to fill forms

Each campaign shows Spend, Impressions, CPM, Clicks, CTR, and CPC. CTR is color-coded: green (>2%), yellow (1-2%), red (<1%).

Section C: Context Graph

A dual-axis chart showing daily trends with a toggle to view by campaign, funnel stage, or all combined:

- Bar chart (left axis): Total daily ad spend
- Line chart (right axis): CTR, CPC, or CPM per day (selectable)

AI Insight — Revenue Engineering

Each section is equipped with automated AI analysis providing: data-driven observations with specific numbers, concrete action recommendations, and a severity indicator (green = good, yellow = attention needed, red = urgent).

Module 2 — Organic Architecture

This module measures Brand Resonance, Community Loyalty, and Traffic Contribution from organic content on Instagram and Facebook.

Section A: Cross-Channel Pulse

A ticker tape displaying follower growth per platform:

- Current follower count
- Net growth (up/down) during the selected period
- Growth percentage
- Average daily growth rate

Section B: Content Library

A library of all content published during the selected period, sortable by:

- Virality Score — (Shares + Saves) / Views x 100
- Conversion Score — Link Clicks / Views x 100
- Views, Likes, or Most Recent

Available in Grid (thumbnail) and Table views. Click Open to view the original post on the platform.

Section C: Metric Stack

Metric cards per platform measuring engagement depth:

- Engagement Rate (ER) — (Likes + Comments + Shares) / Impressions — Benchmark: >5%
- Share of Voice (SoV) — (Saves + Shares) / Impressions — Benchmark: >2%
- Profile Conversion Rate (PCR) — Link Clicks / Profile Visits — Benchmark: >3%
- Consistency Score — Posts Published vs Weekly Target

Section D: Engagement Funnel

A horizontal funnel visualization: Reach → Interaction → Click showing where the audience drops off.

Section E: Content Leaderboard

Top 3 best-performing content of the period:

- Most Shared — Brand Awareness Winner
- Most Commented — Community Engagement Winner
- Most Clicked — Traffic Driver Winner

AI Insight — Organic Architecture

Automated AI analysis for each section, covering content trends, strategy recommendations, and early warnings for performance drops.

3. Data Sources

The dashboard pulls data directly from Meta Graph API v25.0. Below is the detailed data availability per metric:

Metric	Platform	Availability
Followers & Growth	Instagram	Available — Account Insights
Followers & Growth	Facebook	Available — Page Insights
Impressions	Instagram	Available — Account Insights
Impressions	Facebook	Available — Page Insights (if active)
Profile Visits	Instagram	Available — Account Insights
Link Clicks	Instagram	Available — Account Insights
Link Clicks	Facebook	Not Available — API Limitation
Views (Video/Reel)	Instagram	Available — Per Post Insights
Views (Video/Reel)	Facebook	Available — Video Insights
Views (Image/Carousel)	Instagram	Partial — Uses Impressions as proxy
Views (Image/Carousel)	Facebook	Not Available — Meta API Limitation
Likes, Comments, Shares	Instagram	Available — Per Post
Likes, Comments, Shares	Facebook	Available — Per Post
Saves	Instagram	Available — Per Post
Saves	Facebook	Not Available — Feature doesn't exist on FB
Ad Spend, Impressions, Clicks	Meta Ads	Available — Ads Insights
CTR, CPM, CPC	Meta Ads	Available — Calculated from raw data

4. Current Limitations

As a Demo v1.0 platform, there are several limitations to be aware of:

4.1 Meta API Limitations

Views for Image & Carousel

Meta does not provide view metrics for photo and carousel content — only videos and reels have view data. For images and carousels, the dashboard uses impressions as a proxy (only available on Instagram, not Facebook).

Facebook Page Insights

Page Insights (daily impressions, profile visits, etc. at the account level) are only available for Facebook Pages with at least 100 followers. Before reaching this threshold, these metrics will show 0 and the dashboard will automatically use per-post data as a fallback.

Daily Views per Video

The Meta API does not support daily view breakdowns for individual videos. The view data shown represents total lifetime views since the post was published — not views that occurred on a specific day.

Follower Data

Daily follower counts are reconstructed backwards from the current follower count using daily deltas. This is an estimate — not a true daily snapshot from Meta.

4.2 Dashboard Limitations

Static Data (Demo Version)

In this demo version, the data displayed is a snapshot from a specific period and is not updated automatically. Data will be manually updated.

No Revenue/ROAS Tracking

Since Rumah Ningrat is a lead generation business (not e-commerce), there is no revenue, ROAS, or purchase data displayed. Key metrics are CTR and CPC as indicators of ad efficiency.

Modules Not Yet Active

In the current version, the following two modules are not yet active:

- CRO Terminal (Module 3) — Website conversion analysis
- RevOps Automation (Module 4) — AI sales pipeline monitoring

AI Insights Require Internet Connection

The AI Insight feature uses OpenAI GPT-4o-mini and requires an active internet connection. If the connection is interrupted or the API key quota is exhausted, insights will not be displayed.

4.3 Platform Limitations

No Link Clicks on Facebook Organic

Meta does not provide link clicks data at the Facebook account level for organic content. This data is only available on Instagram via Account Insights.

Mobile Performance

The dashboard is optimized for desktop/laptop viewing. On mobile phones, some tables and charts may require horizontal scrolling to see all columns.

5. How to Read the Dashboard

5.1 Color Indicators

The dashboard uses a consistent color system for quick interpretation:

Color	Meaning	Example Usage
Green (above benchmark)	Good performance, on track	CTR >2%, ER >5%
Yellow (70-100% of benchmark)	Approaching target, needs attention	CTR 1-2%
Red (below 70% of benchmark)	Below target, action required	CTR <1%
Blue (#00D4FF)	Information / neutral	Labels, headers
Orange (#FF6B35)	BOF campaigns	Bottom of Funnel

5.2 Benchmarks Used

Metric	Benchmark	Notes
CTR (Meta Ads)	>1.5%	Average for property ads in Indonesia
Engagement Rate	>5%	Social media standard
Share of Voice	>2%	Virality metric
Profile Conv. Rate	>3%	Traffic from profile to website
Consistency Score	>80%	Posting frequency vs weekly target
CPC (Meta Ads)	Depends on campaign	Lower = more efficient

5.3 Available Filters

- Time Range — Last 7 Days / Last 14 Days / Last 30 Days
- Platform — Instagram, Facebook, or both
- View By — Per campaign, per funnel stage, or all combined
- Sort — Sort content by virality, views, likes, etc.

6. AI Insight Prompt Documentation

This section documents all prompts used to generate AI insights in each dashboard section. Each prompt consists of a System Prompt (defining the AI's role) and a User Prompt (containing actual data).

Configuration	Value
Model	GPT-4o-mini (OpenAI)
Max Tokens	600 tokens per response
Response Format	JSON Object {insight, recommendation, severity}
Caching	Per session — no re-generation if data unchanged
Output Language	English
Trigger	Automatic on dashboard load

6.1 Module 2 — Organic Architecture Prompts

Uses OrganicInsightGenerator with one shared System Prompt and 5 individual User Prompts per section.

Organic — Section 1: Cross-Channel Pulse

System Prompt

Defines the AI's role, expertise, and output rules:

```
You are a senior social media strategist and data analyst for Marktivo,
a marketing agency. You analyze social media performance data and provide sharp,
actionable insights for business owners.

Your response must be a valid JSON object with exactly these keys:
- "insight": A direct, data-driven observation. Be specific with numbers. 2-4
sentences.
- "recommendation": A concrete, prioritized action plan. 2-5 sentences.
- "severity": "success" | "warning" | "critical" | "info"

Rules:
- Always reference specific numbers from the data
- Be direct and actionable — no vague advice
- Use business language, not technical jargon
- Focus on what matters most for growth
```

```
- English only
```

User Prompt Template

Sent with real data from the dashboard. [VARIABLES] are replaced with actual values:

```
Analyze the cross-platform follower growth performance:

Period: [SINCE] to [UNTIL]

[PLATFORM]:
  Followers: [START] -> [END] (net: [GROWTH] over [DAYS] days)
  Avg daily growth: [AVG]/day
  Impressions: [IMPRESSIONS]
  Posts published: [POSTS]

Focus on: which platform is growing fastest, any concerning drops,
and what's driving the growth (or lack thereof).
```

Data Variables

- **[SINCE] / [UNTIL]** — Start and end date of the selected period
- **[PLATFORM]** — Instagram or Facebook
- **[START] / [END]** — Follower count at the beginning and end of period
- **[GROWTH]** — Net follower growth (positive or negative)
- **[DAYS]** — Total days in the period
- **[AVG]** — Average daily growth rate
- **[IMPRESSIONS]** — Total impressions during the period
- **[POSTS]** — Total posts published

Analysis Focus

- Which platform is growing fastest
- Any concerning follower drops
- What is driving the growth (or lack thereof)

Organic — Section 2: Metric Stack

System Prompt

Defines the AI's role, expertise, and output rules:

```
(Same system prompt as Section 1 — OrganicInsightGenerator._base_system)
```

User Prompt Template

Sent with real data from the dashboard. [VARIABLES] are replaced with actual values:

```
Analyze the engagement metrics vs benchmarks:

Period: [SINCE] to [UNTIL]
Benchmarks: ER>5%, SoV>2%, PCR>3%, Consistency>80%

[PLATFORM]:
  Engagement Rate    : [ER]% (ABOVE/BELOW benchmark)
  Share of Voice     : [SOV]% (ABOVE/BELOW benchmark)
  Profile Conv. Rate : [PCR]% (ABOVE/BELOW benchmark)
  Consistency Score  : [CS]% (ABOVE/BELOW benchmark)
  Total engagement   : [TOTAL_ENG]

Focus on: which metrics are most off-target, root cause analysis,
and the highest-impact action to improve performance.
```

Data Variables

- **[ER]** — Engagement Rate = (Likes+Comments+Shares) / Impressions x 100
- **[SOV]** — Share of Voice = (Saves+Shares) / Impressions x 100
- **[PCR]** — Profile Conversion Rate = Link Clicks / Profile Visits x 100
- **[CS]** — Consistency Score = Posts Published / Target x 100
- **[TOTAL_ENG]** — Total engagement (likes + comments + shares)

Analysis Focus

- Which metrics are furthest from benchmark
- Root cause analysis for underperformance
- Highest-impact single action to improve performance

Organic — Section 3: Content Library

System Prompt

Defines the AI's role, expertise, and output rules:

```
(Same system prompt as Section 1 — OrganicInsightGenerator._base_system)
```

User Prompt Template

Sent with real data from the dashboard. [VARIABLES] are replaced with actual values:

```
Analyze content performance and content mix:

Period: [SINCE] to [UNTIL]

[PLATFORM]:
  Total posts: [TOTAL]
  Content mix: {Video: N, Reel: N, Image: N, Carousel: N}
  Avg views: [AVG_VIEWS] | Avg likes: [AVG_LIKES]
  Avg saves: [AVG_SAVES] | Avg virality: [AVG_VIRALITY]%
  Top by views: [TITLE] ([VIEWS] views, type: [TYPE])
  Top viral: [TITLE] (virality: [VIRALITY]%)

Focus on: what content type/format is winning,
what patterns make top posts successful,
and specific content strategy recommendations.
```

Data Variables

- **[TOTAL]** — Total posts published in the period
- **[AVG_VIEWS/LIKES/SAVES]** — Average views, likes, saves per post
- **[AVG_VIRALITY]** — Average virality score = (shares+saves)/views x 100
- **Top by views** — Title, views, and content type of most-viewed post
- **Top viral** — Title and virality score of most viral post

Analysis Focus

- Which content type/format is winning
- Patterns that make top posts successful
- Specific content strategy recommendations

Organic — Section 4: Engagement Funnel

System Prompt

Defines the AI's role, expertise, and output rules:

```
(Same system prompt as Section 1 — OrganicInsightGenerator._base_system)
```

User Prompt Template

Sent with real data from the dashboard. [VARIABLES] are replaced with actual values:

```
Analyze the engagement funnel from reach to click:

Period: [SINCE] to [UNTIL]

[PLATFORM]:
  Reach (impressions)  : [IMPRESSIONS]
  Interaction (eng)    : [ENGAGEMENT] -> R-to-I rate: [R_TO_I]%
  Clicks (link clicks) : [CLICKS] -> I-to-C rate: [I_TO_C]%
  Total R-to-C rate    : [R_TO_C]%
  Profile visits       : [PROFILE_VISITS]

Focus on: where the biggest drop-off is in the funnel,
which platform converts best,
and specific tactics to improve the weakest funnel stage.
```

Data Variables

- **[IMPRESSIONS]** — Total content impressions (Reach)
- **[ENGAGEMENT]** — Total interactions = Likes + Comments + Shares
- **[R_TO_I]** — Reach-to-Interaction rate = Engagement / Impressions x 100
- **[CLICKS]** — Total link clicks
- **[I_TO_C]** — Interaction-to-Click rate = Clicks / Engagement x 100
- **[R_TO_C]** — Total Reach-to-Click rate = Clicks / Impressions x 100

Analysis Focus

- Where the biggest drop-off occurs in the funnel
- Which platform converts best
- Specific tactics to improve the weakest funnel stage

Organic — Section 5: Content Leaderboard

System Prompt

Defines the AI's role, expertise, and output rules:

```
(Same system prompt as Section 1 — OrganicInsightGenerator._base_system)
```

User Prompt Template

Sent with real data from the dashboard. [VARIABLES] are replaced with actual values:

```
Analyze the top performing content this period:

Period: [SINCE] to [UNTIL]

[PLATFORM] Top Performers:
  Most viewed  : [TITLE] ([VIEWS] views, [LIKES] likes, type: [TYPE])
  Most liked   : [TITLE] ([LIKES] likes)
  Most viral   : [TITLE] (virality: [VIRALITY]%)

Focus on: what makes these posts winners (format, topic, timing),
patterns to replicate,
and how to turn these wins into a repeatable content strategy.
```

Data Variables

- **Most viewed** — Post with highest views: title, views, likes, content type
- **Most liked** — Post with highest likes
- **Most viral** — Post with highest virality score

Analysis Focus

- What makes these posts winners (format, topic, timing)
- Patterns that can be replicated for future content
- How to turn these wins into a repeatable content strategy

6.2 Module 1 — Revenue Engineering Prompts

Uses RevenueInsightGenerator with a property-specific system prompt and 3 individual User Prompts per section.

Revenue — Section 1: North Star Ribbon

System Prompt

Defines the AI's role, expertise, and output rules:

```
You are a senior performance marketing strategist specializing in
lead generation for property businesses in Indonesia. You analyze Meta Ads data
and provide sharp, actionable insights for business owners.

Context: This is a property/real estate lead gen business. There are no direct
purchases tracked — success is measured by clicks, CTR, CPM, and CPC efficiency.
Campaigns are categorized as TOF (Awareness) or BOF (Lead Gen).

Your response must be a valid JSON object with exactly these keys:
- "insight": Direct, data-driven observation with specific numbers. 2-4 sentences.
- "recommendation": Concrete action steps. Use numbered list if multiple. 2-5
sentences.
- "severity": "success" | "warning" | "critical" | "info"

Rules:
- Always reference specific numbers from the data
- Be direct — no vague advice
- Focus on spend efficiency and lead quality
- Indonesian property market context
- English only
```

User Prompt Template

Sent with real data from the dashboard. [VARIABLES] are replaced with actual values:

```
Analyze overall ad performance KPIs:

Period: [SINCE] to [UNTIL]
Portfolios: [PORTFOLIO_LIST]

Overall:
  Total Spend    : Rp [SPEND]
  Impressions    : [IMPRESSIONS]
```

```
  Clicks        : [CLICKS]
  Avg CTR       : [CTR]% (benchmark: >1.5% for property ads)
  Avg CPM       : Rp [CPM]
  Avg CPC       : Rp [CPC]

Campaigns:
  - [CAMPAIGN_NAME] ([STAGE]): Spend Rp [X] | CTR [X]% | CPM Rp [X] | CPC Rp [X]

Best day CTR  : [CTR]% on [DATE]
Worst day CTR : [CTR]%

Focus on: overall spend efficiency, CTR vs benchmark,
which portfolio/campaign is performing best/worst.
```

Data Variables

- **[SPEND]** — Total ad budget used (IDR)
- **[IMPRESSIONS]** — Total ad impressions
- **[CLICKS]** — Total ad clicks
- **[CTR]** — Click-Through Rate = Clicks / Impressions x 100
- **[CPM]** — Cost Per Mille = Spend / Impressions x 1000 (IDR)
- **[CPC]** — Cost Per Click = Spend / Clicks (IDR)
- **[CAMPAIGN_NAME] + [STAGE]** — Campaign name and funnel stage (TOF/BOF)
- **Best / Worst day** — Date and CTR of best and worst performing days

Analysis Focus

- Overall spend efficiency
- CTR vs property Indonesia benchmark (>1.5%)
- Which campaign/portfolio performs best and worst

Revenue — Section 2: Campaign Terminal

System Prompt

Defines the AI's role, expertise, and output rules:

```
(Same system prompt as Section 1 — RevenueInsightGenerator._base_system)
```

User Prompt Template

Sent with real data from the dashboard. [VARIABLES] are replaced with actual values:

```
Analyze funnel stage performance and budget allocation:

Period: [SINCE] to [UNTIL]

Budget Split:
  TOF (Awareness): Rp [TOF_SPEND] ([TOF_PCT]% of total spend)
  BOF (Lead Gen) : Rp [BOF_SPEND] ([BOF_PCT]% of total spend)

TOF Campaigns:
  - [CAMPAIGN]: CTR [X]% | CPM Rp [X] | Spend Rp [X]

BOF Campaigns:
  - [CAMPAIGN]: CTR [X]% | CPC Rp [X] | Spend Rp [X]

Context: For property lead gen, TOF should build awareness (lower CTR ok),
BOF should drive leads (higher CTR expected, >2%).

Focus on: budget allocation efficiency, which campaigns to scale/cut,
TOF vs BOF balance for property marketing.
```

Data Variables

- **[TOF_SPEND] / [TOF_PCT]** — Total spend and percentage for Awareness campaigns
- **[BOF_SPEND] / [BOF_PCT]** — Total spend and percentage for Lead Gen campaigns
- **TOF Campaigns detail** — CTR, CPM, Spend per awareness campaign
- **BOF Campaigns detail** — CTR, CPC, Spend per lead gen campaign

Analysis Focus

- Budget allocation efficiency between TOF and BOF
- Which campaigns should be scaled or cut
- Ideal TOF vs BOF balance for property marketing

Revenue — Section 3: Context Graph

System Prompt

Defines the AI's role, expertise, and output rules:

```
(Same system prompt as Section 1 — RevenueInsightGenerator._base_system)
```

User Prompt Template

Sent with real data from the dashboard. [VARIABLES] are replaced with actual values:

```
Analyze the daily spend and CTR trend:

Period: [SINCE] to [UNTIL]
Daily data:
  [DATE]: Spend Rp [X] | CTR [X]% | CPC Rp [X]
  [DATE]: Spend Rp [X] | CTR [X]% | CPC Rp [X]
  ...

Overall avg CTR: [AVG_CTR]%
Best day: [DATE] ([CTR]% CTR)
Worst day: [CTR]% CTR

Focus on: spend consistency, CTR volatility,
any concerning trends (dropping CTR with increasing spend = waste),
best days to run ads for property audience.
```

Data Variables

- **Daily data** — Spend, CTR, CPC per day for the selected period
- **[AVG_CTR]** — Overall average CTR for the period
- **Best / Worst day** — Dates with highest and lowest CTR

Analysis Focus

- Spend consistency across the period
- CTR volatility — are there outlier days
- Concerning trend: spend increasing while CTR drops = waste
- Best days to run ads for the property audience

7. AI Response Format

Every prompt is configured with response_format: json_object so the AI always returns valid JSON with 3 fields:

```
{
  "insight": "A direct, data-driven observation with specific numbers.
              2-4 sentences. Example: Instagram CTR reached 3.14%,
              above the 1.5% benchmark for property ads...",

  "recommendation": "Concrete, prioritized action steps.
                     2-5 sentences or numbered list. Example:
                     1. Scale RN Pejambon Leads budget by 20%.
                     2. Pause THR Promo Leads New (low CTR)...",

  "severity": "success" | "warning" | "critical" | "info"
}
```

Severity	Badge Color	Meaning
success	Green	Performing well, above benchmark, on track
warning	Yellow	Needs attention, approaching or below benchmark
critical	Red	Urgent, immediate action required to prevent waste
info	Blue	Neutral observation, not urgent but worth noting

8. Data Reference

This section documents all data files that power the Rumah Ningrat Dashboard. Each file is stored as a Google Sheets document for transparency and easy access by the client team.

8.1 Quick Access Links

Click the links below to access the live data sheets:

Ad Performance Data	Open Google Sheets →	*Meta Ads campaigns & spend*
Content Library Data	Open Google Sheets →	*All posts & engagement metrics*
Organic Data	Open Google Sheets →	*Daily follower & account metrics*

File	Rows
all_meta_ads.csv	1 row per campaign per day
content_library.csv	1 row per post
organic_data.csv	1 row per platform per day

File 1 — Ad Performance Data (all_meta_ads.csv)

Contains daily Meta Ads performance data for all campaigns across both portfolios. Each row represents one campaign's performance on one specific day.

Google Sheets: Open Ad Performance Data →

Column	Data Type	Type	Description
portfolio	Rumah Ningrat Subang / Pejambon	string	Which property portfolio this row belongs to
date	2026-03-21	datetime	Date of the ad performance data (YYYY-MM-DD)
campaign_name	RN Pejambon Leads	string	Full name of the Meta Ads campaign
campaign_id	120242139813150149	integer	Unique Meta campaign identifier
impressions	6,871	integer	Number of times the ad was shown to users
reach	5,396	integer	Number of unique users who saw the ad
clicks	204	integer	Number of clicks on the ad link
spend	56,607.00	float	Amount spent on the campaign in IDR
cpm	8,238.54	float	Cost per 1,000 impressions (IDR)
cpc	277.49	float	Cost per click (IDR)
ctr	2.97	float	Click-through rate (clicks / impressions x 100)
purchases	0	integer	Number of purchases (always 0 for lead gen)
revenue	0	integer	Revenue from purchases (always 0 for lead gen)
roas	0	integer	Return on ad spend (always 0 for lead gen)
cpa	0	integer	Cost per acquisition (always 0 for lead gen)

Funnel Stage Classification

The dashboard auto-classifies campaigns into funnel stages based on campaign name keywords:

Stage	Keyword in Campaign Name	Example Campaign
TOF (Awareness)	awareness	RN Subang Awareness, THR Promo Awareness Broad

BOF (Lead Gen)	leads / lead	RN Pejambon Leads, RN Subang Leads, THR Promo Leads New
UNCATEGORIZED	No matching keyword	Any campaign not matching above

File 2 — Content Library Data (content_library.csv)

Contains performance data for every post published on Instagram and Facebook. Each row represents one individual post with its lifetime metrics.

Google Sheets: Open Content Library Data →

Column	Example Value	Type	Description
date	2026-03-25	datetime	Date the post was published (date_posted, not date viewed)
platform	Instagram / Facebook	string	Social media platform
portfolio	Rumah Ningrat Subang	string	Which property portfolio posted this
title	GAJI 4 JUTA MASIH NGONTRAK?...	string	Post caption (truncated to 80 chars)
content_type	Video / Reel / Image / Carousel	string	Type of content format
views	220	integer	Play count for video/reel. 0 for image/carousel (not available)
likes	153	integer	Total reactions (likes, love, etc.)
comments	18	integer	Total comments on the post
shares	3	integer	Total shares (Instagram) or shares (Facebook)
saves	0	integer	Total saves (Instagram only; always 0 for Facebook)
link_clicks	0	integer	Clicks on link in bio/post (Instagram account level only)
virality_score	100.0	float	(Shares + Saves) / max(Views, 1) x 100
conversion_score	0.0	float	Link Clicks / max(Views, 1) x 100
reach	66	integer	Unique users who saw the post (Facebook video only)
total_plays	69	integer	Total plays including replays (Facebook video only)
avg_watch_sec	3.9	float	Average watch time in seconds (Facebook video only)
video_id	1338972311379730	string	Meta Video ID (Facebook video only; blank for others)
permalink	https://www.instagram.com/reel/...	string	Direct link to the post

thumbnail	https://scontent.cdninstagram.com/...	string	Thumbnail image URL

Important Notes on Views

Content Type	Views Available?	Source
Instagram Video/Reel	Yes	Per-post insights (play count)
Instagram Image	Partial	Uses impressions as proxy (not true views)
Instagram Carousel	Partial	Uses impressions as proxy (not true views)
Facebook Video/Reel	Yes	video_insights → blue_reels_play_count
Facebook Image	No	Not available in Meta API
Facebook Carousel	No	Not available in Meta API

File 3 — Organic Data (organic_data.csv)

Contains daily account-level metrics for both Instagram and Facebook pages. Each row represents one platform's performance on one specific day for one portfolio.

Google Drive: Open Organic Data →

Column	Example Value	Type	Description
date	2026-03-21	datetime	The specific date for this row's metrics
platform	Instagram / Facebook	string	Social media platform
portfolio	Rumah Ningrat Pejambon	string	Which property portfolio
followers	101	integer	Estimated follower count on this date (reconstructed)
follower_growth	+2	integer	Net follower change on this day (can be negative)
impressions	1,250	integer	Total times content appeared in feed on this day
profile_visits	45	integer	Number of profile page visits on this day
link_clicks	8	integer	Clicks on the link in bio (Instagram only; 0 for Facebook)
views	480	integer	Sum of views from posts published on this day

likes	153	integer	Sum of likes from posts published on this day
comments	18	integer	Sum of comments from posts published on this day
shares	3	integer	Sum of shares from posts published on this day
saves	12	integer	Sum of saves from posts published on this day (Instagram only)
posts_published	2	integer	Number of posts published on this specific day
posts_goal_weekly	4	integer	Target number of posts per week (set in config)

Important Notes on Data Accuracy

- followers — Reconstructed backwards from today's count using daily deltas. This is an estimate, not a true daily snapshot from Meta.
- views / likes / comments / shares / saves — These are aggregated from posts published on that day, not interactions that occurred on that day. A viral post from March 25 may still receive views on March 30, but those views are counted under March 25.
- Facebook impressions — Only available if the Facebook Page has 100+ followers and Page Insights is active. Otherwise shows 0.
- Facebook link_clicks — Not available at account level for Facebook. Always 0.
- Facebook saves — Facebook does not have a save feature. Always 0.

This document is prepared exclusively for Marktivo clients and must not be shared with third parties.
